PRODUCT CATEGORIES

FOR INTERNATIONAL SHIPPING

Chemicals & Industrial Materials

Most raw or processed chemicals are regulated due to their potential toxicity, flammability, reactivity, or corrosiveness.

Examples:

- Acetone
- Sodium hydroxide (lye)
- Hydrogen peroxide (industrial grade)
- Paint thinners
- Laboratory reagents

Cosmetics & Personal Care (with Active Chemicals)

Items with alcohols, peroxides, or pressurized contents may be flammable or reactive.

Examples:

- Nail polish remover (acetone)
- Hair dye (ammonia or hydrogen peroxide)
- Aerosol deodorants
- Perfumes and colognes (ethanol)

Aerosol Products

Compressed gas containers are pressurized and often flammable, making them regulated.

Examples:

- Spray paints
- Hair sprays
- Air fresheners
- Insect repellents
- Cooking sprays

Cleaning & Sanitation Products

These often contain strong solvents, surfactants, or biocides that can be hazardous.

Examples:

- Bleach (sodium hypochlorite)
- Ammonia-based cleaners
- Disinfectant sprays
- Drain openers
- Industrial degreasers

Batteries & Electronics (with Lithium or Other Hazardous Components)

Lithium batteries are flammable and pose explosion risks if damaged or shorted.

Examples:

- Smartphones and tablets
- Power banks
- Electric toothbrushes
- Laptops
- Drones

Automotive Products

Automotive fluids and components can be flammable, corrosive, or toxic.

Examples:

- Brake fluid
- Engine oil
- Antifreeze (ethylene glycol)
- Fuel additives
- Car wax with solvents

Paints, Coatings, and Adhesives

Contain volatile organic compounds (VOCs) that are often flammable or toxic.

Examples:

- Spray paints
- Industrial adhesives
- Varnishes and lacquers
- Wood stains
- Solvent-based glues

Pharmaceuticals & Medical Products

Many medications and lab products contain controlled or hazardous substances.

Examples:

- Prescription drugs (with controlled substances)
- First-aid chemical packs
- Vaccine transport kits (with dry ice or alcohol-based preservatives)
- Laboratory kits with reagents

Agricultural Chemicals

These products are tightly regulated due to toxicity and environmental impact.

Examples:

- Pesticides
- Herbicides
- Fertilizers (especially ammonium nitrate-based)
- Insecticides

Construction Materials

Some construction items contain reactive or corrosive components.

Examples:

- Cement additives
- Epoxy resins
- Expanding foam sealants
- Fire retardants

Inks, Toners, and Printing Supplies

These often contain solvents and flammable compounds.

Examples:

- Printer cartridges
- Industrial inks
- Toner powders
- Screen printing solvents

Household Items with Chemical Components

Consumer goods may be hazardous due to content or pressurization.

Examples:

- Laundry detergent pods
- Fabric softeners
- Pest control sprays
- Fuel canisters for camping
